1.0 PREAMBLE

1.1 INTRODUCTION

Zimbabwe embarked on an agrarian Land Reform programme in which mechanization in agriculture is a key component. Consequently, it is imperative that learners, in their diversity, acquire essential agricultural engineering knowledge and skills to enhance food security. This syllabus is designed for LEVEL 111 learners in Agriculture Engineering. Learners must cherish land as their national heritage which can sustainably be used to enhance food security through mechanization. It is hoped that the concepts, principles and practices learnt in Agriculture Engineering will equip learners with relevant skills to use appropriate technology to boost agricultural production. Learners will be assessed through continuous and summative assessments.

1.2 RATIONALE

Agriculture is a learning area studied from level 11 primary to level 11 secondary, therefore it is important for learners to specialize in Agriculture Engineering at level 111 so as to acquire relevant skills and knowledge to enhance food production, create employment and for further learning opportunities. Specialization would enable learners to be proactive, productive and add value to the community and national economy. This learning area will enhance learners' ability to operate, maintain, design, produce and manage agricultural machinery. Learners will, at the end of the one year learning phase, value the dignity of labour, role of mechanization and food sovereignty.

The Agriculture Engineering syllabus will enable learners to develop the following skills:

- Psycho – motor
- Problem-solving
- Critical thinking
- Decision-making

- Conflict resolution
- Leadership and team-work
- Self-management
- Communication
- Technological innovation
- Enterprise development
- Research
- Equipment handling

1.3 SUMMARY OF CONTENT

The learning area will include the study on the creation of a favorable environment for crop and animal production, sources of farm power, farm structures and sustainable use of resources. It will also help learners to acquire competency skills in design, construction, operation and maintenance of farm machinery and structures.

1.4 ASSUMPTIONS

It is assumed that learners have practical skills and knowledge in:

- Agricultural farm machinery and tools.
- General maintenance of farm machinery and tools
- Properties of material
- Soil and water conservation
- Sustainable use of agricultural resources
- E – learning
- Basic scientific calculations

1.5 CROSS- CUTTING ISSUES

The Agriculture Engineering learning area will encompass the following cross cutting themes:

- Environmental issues
- enterprise skills
- Sustainable resource utilisation
- Disaster and risk reduction
- Inclusivity
- Teamwork
- Digital literacy

2.0 PRESENTATION OF SYLLABUS

The Agriculture Engineering syllabus is a single document covering level 111. The syllabus has a suggested list of resources to be used during teaching and learning.

3.0 AIMS

The syllabus aims to help learners to:-

- 3.1 develop an appreciation of the socio-economic importance of Agriculture Engineering to the agriculture industry in the country.
- 3.2 develop positive attitudes towards Agriculture Engineering as a learning area
- 3.3 develop knowledge and understanding of advanced scientific principles in Agriculture Engineering
- 3.4 apply psycho-motor and cognitive skills in solving agriculture engineering problems
- 3.5 develop innovativeness in Agriculture Engineering through sustainable utilization of local resources
- 3.6 prepare learners for life and work in an indigenized and competitive environment

4.0 SYLLABUS OBJECTIVES

By the end of the learning period learners should be able to:

- 4.1 Demonstrate the socio – economic importance of Agriculture Engineering to the agriculture industry in the country.
- 4.2 Demonstrate understanding of Agriculture Engineering terminology, concepts and principles
- 4.3 Apply indigenous knowledge systems (IKS), scientific and mathematical principles in Agriculture Engineering.
- 4.4 Apply problem-solving skills in challenges encountered in agriculture engineering.
- 4.5 Carry-out experiments in Agriculture Engineering
- 4.6 design models and machinery in agriculture engineering
- 4.7 Apply safety precautions in the use of farm machinery and equipment.
- 4.8 demonstrate operational skills in the use of farm structures, machinery and equipment

5.0 METHODOLOGY AND TIME ALLOCATION

Learner-centered and hands-on approaches should be used in the development of concepts and skills. These approaches should be inclusive and encourage curiosity as well as promote practical-orientated learning. Emphasis should be placed on equipping learners with psycho - motor and research skills. Linkage between theory and practice should be implemented in the teaching and learning of Agriculture Engineering.

The following are suggested methods of teaching and learning of Agriculture Engineering:

- Research
- Educational tours
- E-learning
- Problem-solving
- Design
- Exhibitions
- Demonstrations
- Discussions

NB. The above suggested methods should be enhanced by the application of orthodidactic principles and multi-sensory approaches to teaching. These include tactility, concreteness, individualization, self-activity, totality and wholeness. Teachers are encouraged to address the learners' residual senses.

AGRIC ENGINEERING(NON FORMAL) LEVEL III-DO NOT COPY

5.1.1 TIME ALLOCATION

Two hours per week should be allocated, though more time can be created by the learners to adequately cover the syllabus. Learners should be engaged in at least two educational tours per year and one seminar per term.

6.0 TOPICS

1. Farm mechanization
2. Engines
3. Tillage implements
4. Planting and fertilizing equipment
5. Crop protection equipment
6. Harvesting and processing equipment
7. Farm structures
8. Irrigation structures and scheduling
9. Soil and water conservation structures
10. Cost analysis in Agriculture Engineering

7.0 SCOPE AND SEQUENCE

7.1 TOPIC 1: FARM MECHANISATION

TOPIC	LEVEL III
Importance of Farm Mechanization	<ul style="list-style-type: none">• Role of farm mechanization• Workshop practices• Selection of farm machinery
Engineering Mechanics	<ul style="list-style-type: none">• Force• Work• Energy• Power• Machines• Computer applications in agricultural engineering
Sources of Farm Power	<ul style="list-style-type: none">• Renewable sources• Non-renewable sources

7.2 TOPIC 2: ENGINES

TOPIC	LEVEL III
Internal combustion engines	<ul style="list-style-type: none">• Operational principles• Power transmission
Engine systems	<ul style="list-style-type: none">• Fuel system• Cooling system• Lubrication system• Electrical system

7.3 TOPIC 3: TILLAGE IMPLEMENTS

TOPIC	LEVEL III
Tillage implements	<ul style="list-style-type: none">• Tillage implements

7.4 TOPIC 4: PLANTING AND FERTILIZING EQUIPMENT

TOPIC	LEVEL III
Planting and Fertilizing equipment	Planting and fertilizing equipment

7.5 TOPIC 5: CROP PROTECTION EQUIPMENT

TOPIC	LEVEL III
Spraying and dusting equipment	<ul style="list-style-type: none">• Sprayers and dusters• Operational principles

7.6 TOPIC 6: HARVESTING AND PROCESSING EQUIPMENT

TOPIC	LEVEL III
Harvesting and Processing equipment	<ul style="list-style-type: none">• Operational principles

7.7 TOPIC 7: SURVEYING AND FARM STRUCTURES

TOPIC	LEVEL III
Surveying and Farm Structures	<ul style="list-style-type: none">• Surveying for agricultural projects• Environmental Impact Assessment• Theory of structures and stress analysis• Animal structures• Engineering of controlled environments• Storage structures

7.8 TOPIC 8: IRRIGATION, STRUCTURES AND SCHEDULING

TOPIC	LEVEL III
Soil water	<ul style="list-style-type: none">• Soil-plant-water relationships• Soil-water movement and retention• Soil-water determination
Irrigation	<ul style="list-style-type: none">• Irrigation methods• Irrigation designs• Hydraulic irrigation structures• Irrigation scheduling• Irrigation efficiency

7.9. TOPIC 9: SOIL AND WATER CONSERVATION STRUCTURES

TOPIC	LEVEL III
Soil erosion	<ul style="list-style-type: none">• Soil-loss models• Control measures
Water conservation techniques	<ul style="list-style-type: none">• water conservation techniques• Integrated water management (IWM)• water legislation

7.10. TOPIC 10: COST ANALYSIS IN AGRICULTURE ENGINEERING

TOPIC	LEVEL III
Farm machinery operation cost calculations	<ul style="list-style-type: none"> • Valuation of machinery • annual operating costs • income tax and finance

8.0 COMPETENCY MATRIX

LEVEL III SYLLABUS

8.1 TOPIC 1: FARM MECHANISATION

KEY CONCEPT	LEARNING OBJECTIVES Learners should be able to:	CONTENT	SUGGESTED ACTIVITIES AND NOTES	SUGGESTED RESOURCES
Role of farm mechanization	<ul style="list-style-type: none"> • explain the concept farm mechanization • discuss the implementation and impact of farm mechanization in 	<ul style="list-style-type: none"> • Farm mechanization • Role of farm mechanisation 	<ul style="list-style-type: none"> • Explaining the concept of farm mechanization • discussing the implementation and impact 	<ul style="list-style-type: none"> • Farm machinery • Recommended text books/talking

	Zimbabwe		of farm mechanization in Zimbabwe	<ul style="list-style-type: none"> • ICT Tools with JAWS software
Workshop practices	<ul style="list-style-type: none"> • apply safety practices in the workshop • join materials using different welding methods <ul style="list-style-type: none"> • apply welding skills to design appropriate technology 	<ul style="list-style-type: none"> • Workshop safety • Workshop operations: <ul style="list-style-type: none"> -Welding -Soldering -Brazing 	<ul style="list-style-type: none"> • applying safety practices in the workshop eg first aid • Joining materials using different welding methods: which are arc welding, soldering and brazing • Designing farm machinery using welding • 	<ul style="list-style-type: none"> • Farm machinery • Recommended textbooks/ • ICT tools with JAWS software • Workshop foreman •
Selection of farm machinery	<ul style="list-style-type: none"> • classify Farm machinery according to use and power output • match tractor power output and implement power requirements • describe factors affecting selection of farm machinery 	<ul style="list-style-type: none"> • Farm machinery: <ul style="list-style-type: none"> -Types -Classification • Factors affecting selection of farm machinery 	<ul style="list-style-type: none"> • identifying categories and types of farm machinery • classifying tractors according to use and power output • matching tractor power output and implement power requirements • describing factors affecting selection of farm machinery • undertaking an educational tour to a local farm 	<ul style="list-style-type: none"> • Tractor and implements • ICT Tools with JAWS software • Farm mechanic •

KEY CONCEPT	LEARNING OBJECTIVES Learners should be able to:	CONTENT	SUGGESTED ACTIVITIES AND NOTES	SUGGESTED RESOURCES
Force	<ul style="list-style-type: none"> • demonstrate equilibrium of forces • Solve problems related to forces • Determine centre of gravity using freely suspended bodies • discuss the application of friction in farm machinery 	<ul style="list-style-type: none"> • Forces <ul style="list-style-type: none"> - equilibrium of forces - moments of forces • Friction 	<ul style="list-style-type: none"> • Demonstrating equilibrium of forces • Solving problems related to forces • Determining centre of gravity using freely suspended bodies • Discussing the application of friction in farm machinery 	<ul style="list-style-type: none"> • Objects and materials to demonstrate forces Print and electronic media • ICT Tools with JAWS software
Work, Energy and Power	<ul style="list-style-type: none"> • describe types of energy • calculate work done • solve problems related to work, energy and power 	<ul style="list-style-type: none"> • Types of energy • Work done • Power output 	<ul style="list-style-type: none"> • Describing types of energy such as potential, kinetic, electrical, heat • Calculating work done (Work = Force X Distance) • Solving problems related to work, energy and power 	<ul style="list-style-type: none"> • Tractor and implements Print and electronic media • ICT Tools with JAWS software
Machines	<ul style="list-style-type: none"> • identify drives used in farms 	<ul style="list-style-type: none"> • Types of Drives: <ul style="list-style-type: none"> -Chains -Belts -Pulleys -Gears -Block and Tackles Operational Mechanisms 	<ul style="list-style-type: none"> • Identifying drives used in farms • Describing operational principles of drives : levers, 	<ul style="list-style-type: none"> • Machines Print and electronic media • ICT Tools with JAWS software

	<ul style="list-style-type: none"> • describe operational principles of drives • calculate machinery efficiency, mechanical advantage and velocity ratio <p>design agricultural machinery</p> <ul style="list-style-type: none"> • operate agricultural machinery • carry-out routine maintenance procedures on farm machinery 	<p>Machinery efficiency</p> <ul style="list-style-type: none"> • designs and models • machinery operation • routine maintenance of farm machinery 	<p>wheel and axle, velocity ratio, mechanical advantage, efficiency</p> <ul style="list-style-type: none"> • Calculating machinery efficiency = $\frac{\text{Work output}}{\text{work input}}$, mechanical advantage = $\frac{\text{Load}}{\text{Effort}}$, Velocity Ratio = $\frac{\text{Distance moved by Effort}}{\text{Distance moved by load}}$ • Designing agricultural machinery • Operating farm machinery • Carrying-out routine maintenance procedures on farm machinery 	
<p>Computer applications in agricultural engineering</p>	<ul style="list-style-type: none"> • describe the significance of computer programmes in agricultural engineering • carry out computer programming for selected agricultural equipment 	<ul style="list-style-type: none"> • Computer programming 	<ul style="list-style-type: none"> • describing the application of computer programmes in agricultural engineering carrying out computer programming for selected agricultural equipment 	<p>Print and electronic media</p> <ul style="list-style-type: none"> • ICT Tools with JAWS software

KEY CONCEPT	LEARNING OBJECTIVES Learners should be able to:	CONTENT	SUGGESTED ACTIVITIES AND NOTES	SUGGESTED RESOURCES
Renewable Sources of farm power	<ul style="list-style-type: none"> • discuss applications of renewable energy in agriculture 	<ul style="list-style-type: none"> • solar energy • hydro-energy • Wind 	<ul style="list-style-type: none"> • discussing applications of renewable energy in agriculture. • designing systems to harness renewable energy 	<ul style="list-style-type: none"> • Locally available renewable sources of farm power Print and electronic media <ul style="list-style-type: none"> • ICT Tools with JAWS software

7.10 TOPIC 10: COST ANALYSIS IN AGRICULTURE ENGINEERING.

KEY CONCEPT	LEARNING OBJECTIVES Learners should be able to:	CONTENT	SUGGESTED ACTIVITIES AND NOTES	SUGGESTED RESOURCES
Valuation of machinery	<ul style="list-style-type: none"> determine the value of machinery over time 	<ul style="list-style-type: none"> Valuation of machinery: <ul style="list-style-type: none"> - depreciation -analysis time period -remaining value period -purchase and selling price 	<ul style="list-style-type: none"> Calculating: <ul style="list-style-type: none"> - depreciation -analysis time period -remaining value period -purchase and selling price 	<ul style="list-style-type: none"> Recommended textbooks ICT tools Machinery records
Annual operating costs	<ul style="list-style-type: none"> identify fixed and variable costs apply fixed and variable costs in determining profitability and sustainability of machinery use 	<ul style="list-style-type: none"> Operating costs: <ul style="list-style-type: none"> - fixed costs - variable costs 	<ul style="list-style-type: none"> Identifying operating costs Applying fixed and variable costs in determining profitability and sustainability of machinery use 	<ul style="list-style-type: none"> Recommended textbooks ICT tools Financial records

Income Tax and finance	<ul style="list-style-type: none"> • apply net-cash flows concept • apply results of analysis in decision making process • formulate budgets 	<ul style="list-style-type: none"> • Machinery financial budgets: <ul style="list-style-type: none"> -cost of capital -net present value -marginal tax rates 	<ul style="list-style-type: none"> • Applying net-cash flows concept in computing net-present value • Applying results of machinery cost analysis in the decision making process • Computing budgets: <ul style="list-style-type: none"> -cash-flow -break-even analysis -gross-margin -partial budgets 	<ul style="list-style-type: none"> - Budgets - ICT Tools with JAWS Software

8.0 ASSESSMENT MODEL

Agriculture engineering learning area will be assessed through continuous and summative assessment

ASSESSMENT

ASSESSMENT COMPONENT	WEIGHTING
Continuous assessment	30%
Summative assessment	70%

CONTINUOUS ASSESSMENT

Assessment will be done through

Theory Assignments	5%
Tests	7%
Designs and Models	10%
Experimental Tests	8%

ASSESSMENT MODE	LEVEL III WEIGHTING
Theory assignment	5%
Tests	7%
Designs and Models	10%
Experimental tests	8%

ASSESSMENT MODE	FREQUENCY PER LEVEL
	LEVEL III
Theory assignments	2 per year
Tests	2 per year
Designs and Models	2 for the 2 levels
Experimental tests	2 per year

SUMMATIVE ASSESSMENT 70%

Learners are required to take papers 1 to 3.

PAPER DESCRIPTION	DURATION	MARKS	WEIGHTING
Paper 1	1 hour	40	10%
Paper 2	2 hours 30mins	100	35%
Paper 3	2 hours	40	10%

PAPER 1

Consists of multiple choice questions from the whole syllabus. Candidates will be required to answer all 40 questions.
Total marks 40

PAPER 2

This is a structured free response paper which has 2 sections namely A and B. Both sections are set from any part of the syllabus.

SECTION A

Candidates are required to answer all questions in this section. Six questions will be set, each question carries 10 marks
Section total 60 marks

SECTION B

Essay type questions will be set from any part of the syllabus. Four questions will be set and candidates will be required to answer any 2 questions. Each question carries 20 marks.

Section total (40)
Paper total (100)

PAPER 3

A practical examination will be set from any part of the syllabus. The paper will be based on experiments, investigations, observations and calculations. Full instructions will be given where unfamiliar material or techniques will be required.

Two compulsory questions will be set. Each question carries 20 marks.
Total 40 marks

Skills Specification Grid

ASSESSMENT SKILL	PAPER 1	PAPER 2	PAPER 3
Knowledge with understanding	50	40	15
Application of knowledge	30	40	35
Experimental skills	20	20	50
Total	100	100	100

ASSESSMENT OBJECTIVES

Learners will be assessed on their ability to demonstrate knowledge and understanding, application of knowledge and experimental skills

Knowledge and understanding

- discuss, describe, identify and demonstrate specific agricultural engineering facts, principles, relationships, concepts, practical techniques and terminology.
- summarise and explain any given agricultural engineering information.

Application of knowledge

- illustrate interpret, solve and criticize specific phenomena of agricultural engineering.
- schedule, test and experiment, using agricultural engineering facts and principles.
- compare, contrast and criticise any procedures, processes and techniques employed in agricultural engineering.

Experimental skills

- design and develop experimental activities in agricultural engineering.
- report, illustrate and interpret observations correctly.
- assess and justify methods of production employed in agricultural engineering.
- compose, construct and organise given agricultural engineering facts into diagrams, tables and graphs.
- analyse, interpret and evaluate results from any given agricultural engineering activity.

9.0 SUGGESTED RESOURCES FOR AGRICULTURE ENGINEERING

- petrol and diesel engines (tractor and generator)
- workshop and workshop equipment
 - arc welding machine complete with accessories
 - Gas welding
 - Grinders
 - spanners
 - drills
 - compressor
 - cutting equipment
 - protective equipment
 - consumables
- survey kit
- farm machinery
- neutron probes,
- tensiometer
- recommended textbooks/talking
- Computers with JAWS Software
